Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                immunologically active conformation.

The CP can be used in a novel detection/mapping process, e.g. to determine the min. epitope required to induce opsonic antibodies (Ab), and in vaccines against pp. A Streptococci. Ab raised against the CP can be used for immunotherapy and diagnosis, while the CP can be used diagnostically to detect Ab.
                                                                                                                                              The present peptide is a fragment of the Streptococcal M protein peptide p145 (Pruksakorn et al. J. Immunol. 149: 2729-2735 (1992)), used in the construction of a novel chimaeric peptide (CP). The CP comprises a B-cell conformational epitope from within p145, inserted into a 2nd peptide, pref. an alpha-helical coil based on the GCN4 leucine zipper peptide (AAR97395). The 2nd peptide has a similar conformation, enabling the epitope to be presented in an
                                       New chimaeric peptide(s) including a conformational epitope -
inserted into a peptide having similar native conformation, useful
in vaccines and for determn. of minimal epitope(s) or for mapping
amphipathic helices

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                            The present peptide is a fragment of the Streptococcal M protein peptide p145 (Pruksakorn et al, J. Immunol. 149: 2729-2735 (1992)), used in the construction of a novel chimaeric peptide (CP). The CP comprises B-cell conformational epitope from within p145, inserted into a 2nd peptide, pref. an alpha-helical coil based on the GOW4 leucine zipper peptide (AAR97395). The 2nd peptide has a similar conformation, enabling the epitope to be presented in an immunologically active conformation.

The CP can be used in a novel detection/mapping process, e.g. to determine the min. epitope required to induce opsonic antibodies the CP can be used for immunotherapy and diagnosis, while the CP
in vaccines and for determn. of minimal epitope(s) or for mapping amphipathic helices
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ó

This invention describes novel octapepide compounds (I) which have thrombolytic, cardiant, antiarteriosclerotic, cytostatic, osteopathic, thrombolytic, cardiant, antiarteriosclerotic, cytostatic, osteopathic, cardialmanial, antidiabetic, vulnerary, antialicer, cardiant, antidiabetic, ophthalmological, antidiabetic, ophthalmological, cardirheumatic, antiarthritic, vasotropic, nephrotropic and encurportective. The compounds were tested for their ability to compete with fibronectin for binding to alpha_vbeta_6 integrin receptors in vitro. The compounds are useful as alpha_vbeta_6 integrin inhibitors for the treatment of thrombosis, coronary infarction, coronary heart disease, arteriosclerosis, tunors, osteoporosis, fibrosis, inflammation, infection and psoriasis, and for healing wounds. They can also be used to treat respiratory and gastrointestinal disorders (e.g. ulcerative colitis or crohn's disease), apoplexy, angina pectoris, diabetic retinopathy, myopia, macular degeneration, ocular histoplasmosis, rheumatoid arthritis, osteoarthritis, rubeotic glaucoma, post angioplastic restenosis, acute kidney failure and multiple sclerosis. The compounds are also useful in diagnosis for detection and localization of pathological conditions affecting the epithelial system. They can be conjugated with biotin, radiolabels, marker proteins or antibodies for this purpose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Integrin; inhibitor; thrombolytic; cardiant; antiarteriosclerotic; cytostatic; osteopathic; antinflammatory; antimicrobial; antipsoriatic; vulnerary; antiulcer; cerebroprotective; antianginal; antidiabetic; ophthalmological; antirheumatic; antiarthritic; vasotropic; nephrotropic; neuroprotective; thrombosis; coronary infarction; coronary heart disease; arteriosclerosis; tumor; osteoporosis; fibrosis; inflammation; infection; psoriasis; wound healing; gastrointestinal disorder; epithelial system;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes novel octapepide compounds (I) which have thrombolytic, cardiant, antiarterlosciercic, cytostatic, osteopathic, cardiant, antiarterlosciercic, cytostatic, osteopathic, cartiniflammatory, antianginal, antidiabetic, ophthalmological, cerebroprotective, antianginal, antidiabetic, ophthalmological, antiarthritic, vasorropic, nephrotropic and cartinific antiarthritic, vasorropic, nephrotropic and cartinific antiarthritic, vasorropic, nephrotropic and cartinific compete with fibronectin for binding very tested for their ability to compete with fibronectin for binding to alpha_vbeta_6 integrin receptors in the reatment of thrombosis, coronary hadronic, concary infection the treatment of thrombosis, coronary inferction, coronary heart disease, arteriosclerosis, tumors, osteoporosis, fibrosis, inflammation, infection and psoriasis, and for healing wounds. They can also be used to treat cerpiratory and gastroinfestinal disorders (e.g. ulcerative colitis or Crohn's disease), apoplexy, angina pectoris, diabetic retinopathy, myopia, macular degeneration, ocular histoplasmosis, rheumatoid arthritis, osteoarthritis, rubeoic glaucoma, post angioplastic cestenosis, acute kidney failure and multiple sclerosis. The compounds are also useful in diagnosis for detection and localization of pathological conditions affecting the epithelial system. They can be conjugated with blotin, radiolabels, marker proteins or antibodies for this purpose. The compounds are specific and selective for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

Monoclonal antibodies which inhibit type II phospholipase A2 are useful in the treatment of myocardial infarction, cerebral infarction, acute kidney failure, chronic rheumatism, cardiac shock, pancreatitis, adult respiratory distress syndrome and colitis. The antibodies were generated by immunising Balb/C mice.with recombinant human type II phospholipase A2. Splean calls from the mice were tueed with mouse myeloma P3UI (P3x63x98.UI) and the hybridomas obtained were screened for phospholipase A2 inhibitory activity.

Active clones were isolated including 12H5, 1.4 and 10.1. These supernatant by precipitation with ammonium sulphate and purification on a column of protein A-Sepharose CL4B. Because the antibody acts on the primate and mouse forms of enzyme as well as human it is particularly suitable for preclinical testing. This peptide sequence corresponds to the third complementary determining region of the heavy chain of the monoclonal antibody isolated from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Monoclonal antibody; type II phospholipase A2; inhibition; cisplatin; amelioration; kidney disorder; nephrotoxicity; anticancer.

This invention describes novel cyclic peptides (1), containing 8 amino acid residues and optionally further alpha,omega-aminocarboxylic acid residues. Cyclic peptides of formula Cyclo.(Arg.x.1-Asp.x.1-X.2-x.3-x.4-x.2-x.3-x.4-x.1) (1) and their salts and solvates. X.1 = Ser, Gly or Thr: X.2 = Leu, Ile, Nle, val or Phe; X.3 = Asp, Glu, Lys or Phe; X.4 = Gly, Ala or Ser; X.5 = Leu, Ile, Nle, val or Phe; X.6 = Arg, Har or Cys; R.1 = one or more omega-aminocarboxylic acid residues are length of 50-2500 mum; or is absent; the amino acid residues are length of 50-2500 mum; or is absent; the amino acid residues are coptionally derivatized and include b-as well as L-forms (in the case of coptionally derivatized and include b-as well as L-forms (in the case of coptionally active aminoacids). The products of the invention have antithrombotic, carddant, antidiabetic, ophthalmological, cerebroprotective, antianginal, antidiabetic, ophthalmological, cerebroprotective, antianginal, antidiabetic, ophthalmological, cerebroprotective, antidiabetic, ophthalmological, cerebroprotective, antianginal, antidiabetic, ophthalmological, cerebroprotective, antidiabetic, ophthalmological, cerebroprotective, antidiabetic, ophthalmological, cerebroprotective, antidiabetic, ophthalmological function of alpha_vbeta_6-integrin receptors, especially thrombosis, cardiac infarction, coronary heart disease, arteriosclerosis, thrombosis, osteoproresis, fibrosis, inflammation, infection, psoriasis and wound healing deficiency. Other disclosed disorders to be treated include apoplexy, angine pectoris, ophthalmological diseases, arteriosis, included apoplexy, angine pectoris, ophthalmological diseases, acteriosis, cubector glaucoma), rheumatoid arthritis, osteoarthritis, crohn's disease, atherosclerosis, restenosis after angioplasty, acute renal failure, renal inflammation or multiple sclerosis. (I) may be used to prepare affinity chromatography columns for purifying integrin controlled. (I) are well the are well characted and have good alpha_order_fi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cyclic peptide; antithrombotic; cardiant; antiarteriosclerotic; cytostatic; osteopathic; antiinflammatory; antibacterial; antipsorlatic; vulnerary; cerebroprotective; antianginal; antidiabetic; nephrotropic; ophthalmological; antiarthritic; antitheumatic; antiulcer; vasotropic;
                                                                                                                                                                                                                                                                                                                                                New cyclic peptides, are alpha(v)beta(6) integrin receptor inhibitors useful e.g. for treating thrombosis, coronary heart disease, tumors, osteoporosis, inflammation or infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Integrin alpha-Vbeta-6 cyclic peptide inhibitor #8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         100.0%; Score 20; DB 22;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              q
                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a complementary determining region (CDR) from monoclonal antibody 1.4 heavy chain against type II phospholipase A2, from the present invention. The present invention of thospholipase A2, from the present invention of kidney disorders (such as acute renal fallure) associated with the administration of cispatath for the treatment of cancer. The method comprises treatment with a monoclonal antibody which inhibits the activity of type II phospholipase A2 (particularly of type II phospholipase A2, and has the ability to release type II phospholipase A2, and has the ability to release type II phospholipase A2, and has the ability to release type II phospholipase A2, and has the ability to release type II phospholipase A2, and has the ability to release type II phospholipase A2, and has the ability to release type II phospholipase A2, and has the ability to release type II phospholipase A2, and has the ability to release type II phospholipase A2, and has the ability to release type II phospholipase A2, and has the ability to release type II phospholipase A2, and has the ability to release type II phospholipase A2, and has the ability to release type II phospholipase A3, and has the ability to release type II phospholipase A3, and has the ability to release type II phospholipase A3, and has the ability to release type II phospholipase A3, and has the ability to release type II phospholipase A3, and has the ability to release type II phospholipase A3, and has the ability to release type II phospholipase A3, and has the ability to release type II phospholipase A3, and has the ability to release type II phospholipase A3, and has the ability to a cell method can be used for suppressing the nephrotoxicity which is a characteristic feature of cisplatin administration, and therefore allowing more efficient used for suppressing th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

antinflammatory, antibacterial, antipsoriatic, vulnerary,
cerebroprotective, antitanginal, antidiabetic, ophthalmological,
antiarthritic, antitanginal, antidiabetic, ophthalmological,
antiarthritic, antitangual, antidice, vasotropic, nephrotropic,
neuroprotective. (I) are used for treating diseases involving expression
and pathological function of alpha_vbeta_6-integrin receptors, especially
thrombosis, cardiac infarction, coronary heart disease, arteriosclerosis,
tumors, osteoporosis, fibrosis, inflammation, infection, psoriasis and
wound healing deficiency. Other disclosed disorders to be treated include
apoplexy, angina pectoris, ophthalmological diseases, (e.g. diabetic
retinopathy, macular degeneration, myopla, ocular histoplasmosis or
rubeotic glaucoma), rheumatoid arthritis, osteoarthritis, ulcerative
colitis, Crohn's disease, atherosclerosis, restenosis after angioplasty,
acute renal failure, renal inflammation or multiple sclerosis. (I) may
also be useful in analytical biology and molecular biology; e.g.
fluorescently labeled (I) may be used as diagnostic markers or (I) may
used to prepare affinity chromatography columns for purifying integrins.
NNA encoding (I) may be used for treating the same disorders as (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cyclic peptide; antithrombotic; cardiant; antiarteriosclerotic; cytostatic; osteopathic; antiinflammatory; antibacterial; antipsoriatic; vulnerary; cerebroprotective; antianginal; antidabetic; nephrotropic; ophthalmological; antiarthritic; antihemmatic; antiulcer; vasotropic; neuroprotective; alpha_vbeta_6-integrin receptor; thromboals; tumor; cardiac infarction; coronary heart disease; arteriosclerosis; fibrosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes novel cyclic peptides (I), containing 8 amino acid residues and optionally further alpha,omega-aminocarboxylic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New cyclic peptides, are alpha(v)beta(6) integrin receptor inhibitors useful e.g. for treating thrombosis, coronary heart disease, tumors, osteoporosis, inflammation or infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

cc residues. Cyclic peptides of formula Cyclo-(Arg-X_1-Asp-X_1-X_2-X_3-X_4-X_5-R_1) (1) and their salts and solvates. X_1 = Ser, Gly or Thr:

CC X_2 = Leu, Ile, Nle, val or Phe; X_3 = Asp, Glu, Lys or Phe; X_4 = Gly, Ala or Ser; X_5 = Leu, Ile, Nle, val or Phe; X_6 = Arg, Har or CG 1y, Ala or Ser; X_5 = Leu, Ile, Nle, val or Phe; X_6 = Arg, Har or Lys; R_1 = one or more omega-aminocarboxylic acid residues, having a coptionally derivatized and include b- as well as L-forms (in the case of optionally active aminoacids). The products of the invention have coptionally active aminoacids). The products of the invention have antiinflammatory, antibacterial, antigosoriatic, cytostatic, osteopathic, antiinflammatory, antibacterial, antigosoriatic, ophthalmological, antinflammatory, antidiabetic, ophthalmological, antinflammatory antidiabetic, ophthalmological corrective, antidiabetic, ophthalmological increaping diseases involving expression and pathological function of alpha-vbeta 6-integrin receptors, especially through of alpha-vbeta 6-integrin receptors, especially coronary heart diseases involving expression and pathological function of alpha-vbeta 6-integrin receptors, especially coronary heart disease, arteriosclerosis, thrombosis, cardiac infarction, coronary heart disease, arteriosclerosis, transpolasmosis or cumors, osteoporosis, inflammation, infection, psoriasis and wound healing deficiency other disclosed disorders to be treated include apoplexy, angina pectoris, ophthalmological diseases (e.g. diabetic colitis, Crohn's disease, atherosclerosis, restenosis after angioplasty, cubectic glaucoma), rheumatoid arthritis, osteopathritis, and colony; escapeorathritis, also be useful in analytical biology and molecular biology; e.g.

colitis, Crohn's disease, atherosclerosis, restenosis after angioplasty also be useful in analytical biology and molecular biology; e.g.

colitis, crohn's disease, atherosclerosis, e.g.

colitis, crohn's disease, atherosclerosis colory e.g.

colory prepare affinity chromatography colum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

also be useful in analytical biology and molecular biology; e.g., fluorescently labeled (I) may be used as diagnostic markers or (I) may be used to prepare affinity chromatography columns for purifying integrins. DNA encoding (I) may be used for treating the same disorders as (I) itself. (I) are well tolerated and have good alpha_vbeta_6-integrin
                                                                                                                                                                                                                                                                     This invention describes novel cyclic peptides (I), containing 8 amino acid residues and optionally further alpha, omega-aminocarboxylic acid
                                                                                                                                                                                                               New cyclic peptides, are alpha(v)beta(6) integrin receptor inhibitors useful e.g. for treating thrombosis, coronary heart disease, tumors, osteoporosis, inflammation or infections
                                                                     /note= "4-aminobutyric acid"

This invention describes novel cyclic peptides (1), containing 8 amino acid residues and optionally further alpha,omega-mainocarboxylic acid residues. Cyclic peptides of formula Cyclo-(Arg-X_1-Asp-X_1-X_2-X_3-X_4-X_5-X_6-R_1) (I) and their salts and solvates. X_1 = Ser, Gly or Thr; X_2 = Leu, Ile, Nle, val or Phe; X_3 = Asp, Glu, Lys or Phe; X_4 = Gly, Ala or Ser; X_5 = Leu, Ile, Nle, val or Phe; X_6 = Arg, Har or Lys; R_1 = one or more omega-mainocarboxylic acid residues, having a length of 50-2500 mum; or is absent; the amino acid residues, having a length of 50-2500 mum; or is absent; the amino acid residues are optionally derivatized and include D- as well as L-forms (in the case of optically active aminoacids). The products of the invention have antitarterior, cardiant, antiarteriorsclerotic, cytostatic, osteopathic, antiinflammatory, antibacterial, antidabetic, opthhalmological, antianginal, antidabetic, opthhalmological, orentropic, antiinflammatory, antibacterial, antidabetic, opthhalmological, orentropic, antiinflammation, infection, psoriasis and pathological function of alpha_vbeta_6-integrin receptors, especially thrombosis, cardiac infarction, coronary heart disease, arteriosclerosis, thrombosis, cardiac infarction, coronary heart disease, arteriosclerosis, tumors, osteopropis, other disclosed disorders to be treated include apoplexy angina pectoris, ophthalmological diseases (e.g. dlabetic rethopethy, macular degeneration, myopia, ocular histoplasmosis or rubbotic glaucoma), rheumatoid arthritis, osteoarthritis, ulcerative collitis, Crohn's disease, atherosclerosis, restenosis after angioplasty, and and pathology and molecular biology; e.g. fluorescently labeled (I) may be used as diagnostic markers or (I) may eused to prepare affinity chromatography columns for purifying integrins.
                                                                                                                                                                           Cyclic peptide; antithrombotic; cardiant; antiarteriosclerotic; cytostatic; osteopathic; antiinflammatory; antibacterial; antipsoriatic; vulnerary; cerebroprotective; antianginal; antidiabetic; nephrotropic; ophthalmological; antiarthritic; antihemmatic; antiulcer; vasotropic; neuroprotective; alpha vbeta. 6-integrin receptor; thrombosis; tumor; cardiac infarction; coronary heart disease; arteriosclerosis; fibrosis; osteoporosis; inflammation; infection; psoriasis; wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes novel cyclic peptides (I), containing 8 amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New cyclic peptides, are alpha(v)beta(6) integrin receptor inhibitors useful e.g. for treating thrombosis, coronary heart disease, tumors, osteoporosis, inflammation or infections
                                                                                                                                  Integrin alpha-Vbeta-6 cyclic peptide inhibitor #24.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /label= Abu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                      ó;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                   Saccharomyces cerevisiae; complementary peptide; peptide identification; drug discovery; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to the identification of complementary peptides by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relavant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and drugs for drug discovery and as lead ligands for drug design and development. The present sequence is a complementary peptide from
                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
DNA encoding (I) may be used for treating the same disorders as (I) itself. (I) are well tolerated and have good alpha_vbeta_6-integrin receptor inhibiting activity.
                                                                      ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relevant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and frugs for drug discovery and as lead ligands for drug design and development. The present sequence is a complementary peptide from saccharomyces cerevisiae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;
